

Homework #7

Due 8am EST Wednesday Nov 12, 2014

Econ B2000, MA Econometrics

Kevin R Foster, CCNY

Fall 2014

Each student should submit a separate assignment, even if it is an identical computer file to the rest of your study group. When submitting assignments, **please include your name and the assignment number as part of the filename**. Please write the names of your study group members at the beginning of your homework.

1. What are the names of the people in your study group?
2. Each person in the group should find 2 academic articles related to your current choice of final project. Write a short paragraph on each, concentrating on what data is used (and whether it is accessible), what econometric techniques, and what questions are addressed.
3. Estimate a nice regression (lots of dummies maybe in multiple levels, nonlinear terms, experiment with functional forms, etc) to look at the returns to education. Do occupation/industry/geography controls change it much? Why?
